

Design principles for the future of Expert Workspace

A conversational, guided, AI-powered experience that feels simple, personal, and white-glove—every time.

1. Less typey, more talkey. Bring it to me so I can stay engaged.
2. Keep up with the conversation. Be there when I need it.
3. Show me context. Build trust by showing your work.
4. Single pane of focus. So I know where to look.
5. Don’t make me think. Reading and talking is hard, y’all.

✨ Narrative vision statement

When an Asurion expert connects with a customer by chat or voice, we want the experience to feel effortless, personal, and genuinely helpful. Expert Workspace should work quietly in the background, bringing together the right tools, the right insights, and the right next steps. It should feel like a single, thoughtful conversation backed by deep expertise. With every interaction, we're showing customers that we know them, we understand what they need, and we're here to make their day a little easier.

---

1. See what you need, when you need it.

We bring everything together—guidance, tools, information, and next steps—into one clear workspace so experts can stay focused on the conversation, not the system.

- Combine chat, voice tools, actions, steps, troubleshooting, and sales flows in one place.
- Surface the right insight or option at the right time, based on the customer's needs and the flow of the conversation.
- Eliminate guesswork by making the right next step clear, timely, and actionable.
- Create an experience that feels calm, intentional, and premium—simple on the surface, sophisticated underneath.

This principle ensures the system works quietly in the background, always pointing the expert forward.

---

2. Know the customer the moment they reach us.

We instantly recognize who we're helping and what they might need, giving experts the confidence to deliver a personalized, white-glove experience from the very first message.

- Automatically match and surface customer plans, devices, history, and recent activity.
- Reuse information customers have already shared—no repeated questions, no friction.
- Bring forward what matters most for solving, serving, or offering the right product at the right time.
- Help experts build trust quickly, showing customers they're seen, understood, and in good hands.

When experts start informed, customers feel genuinely cared for—and the interaction becomes easier for everyone.

---

3. Build clarity into every interaction.

We design clear, simple, transparent experiences so experts always understand what they're seeing, why it matters, and what they should do next.

- Use plain, friendly language that feels human and reassuring.

- Explain AI-driven recommendations in a straightforward way—never vague, never mysterious.
- Present steps, options, and actions with visual and verbal clarity so experts can move quickly and confidently.
- Reduce cognitive load by showing only what’s relevant and keeping signals consistent.

Clarity turns complexity into confidence, allowing experts to deliver help that feels thoughtful and effortless.

---

4. Remove friction so experts can focus on people.

We streamline every workflow and automate the busywork so experts can devote their time and energy to real human connection.

- Automate repetitive tasks like lookups, form entry, and after-call work wherever it makes sense.
- Shorten paths to resolution by removing unnecessary steps, clicks, and decisions.
- Offer shortcuts and suggested actions that keep momentum without feeling pushy or rigid.
- Make it easy for experts to stay present, empathetic, and supportive-the qualities that define Asurion's service.

Friction-free workflows don’t just save time—they elevate the entire customer experience.

---

5. Improve experts and the system—together

We build Expert Workspace to actively help experts perform better while the system learns and evolves at the same time.

- Identify trends across millions of interactions to improve guidance, flows, offers, and predictions.
- Coach experts in the moment with timely, relevant guidance that builds confidence and sharpens skills.

- Capture expert feedback easily and turn it into meaningful platform improvements. ~~Allow experts to quickly share what helped or didn't-turning frontline insight into platform improvement.~~
- Adapt coaching and suggestions as experts grow, so support evolves with experience.
- Ensure the platform becomes more intuitive, more accurate, and more emotionally intelligent with every release.

A strong platform doesn’t just learn—it helps experts grow, so every interaction gets better.
